

## MINUTES OF PUBLIC CONSULTATION MEETING REGARDING CONSTRUCTION OF SEWAGE TREATMENT PLANT AT A-KASPA ON 26.11.2021 UNDER UGSS TO AMBUR MUNICIPALITY

A public consultation meeting for constructing Sewage Treatment Plant (STP) at A-Kaspa area was conducted on 26.11.2021 at 11.00am in Ambur Municipality by the Commissioner and Municipal Engineer of Ambur Municipality along with Tamil Nadu Water Supply and Drainage Board (TWAD) officials. The Commissioner presided the meeting and the Municipal Engineer welcomed the participants and briefed about the Underground Sewerage Scheme to Ambur Municipality. The Municipal Engineer has informed that 85% of Collection System works were completed and the construction works for STP were commenced in A-Kaspa proposed site.

The Municipal Engineer explained the necessity for implementing underground sewerage scheme to Ambur Municipality and the benefits of the treatment plant for the Ambur Municipal people by citing various operating sewage treatment plants in Tamil Nadu. The Executive Engineer, TWAD Board explained the process and functioning of the sewage treatment plant under Ambur UGSS.

Following this, the officials of Ambur Municipality and TWAD invited the public/residents to express their views, concerns and queries. Some of the participants raised objections for the construction of STP at A-Kaspa. The views and questions of the public/residents and clarifications given by the Officials are detailed below:

S. No.	The views and questions of the public	Clarification given by the Officials of TWAD / Ambur Municipality
1.	The proposed location of the STP.	STP – A-Kaspa near MPS and 12.5LL Elevated Service Reservoir.
2	The need for change of the Solur STP site (already fixed) was changed in to A-Kaspa area.	The distance from Ambur Municipality to Solur is 8.50 km and the treated effluent discharge point from STP is 2.00 km in Palar River. By changing the STP site from Solur to A-Kaspa, the capital cost is reduced from Rs.19.55 crores to Rs.2.82 crores. The private land cost is Rs.5.22 crores. The overall savings in capital cost works out to Rs.11.51 crores. The Operation & Maintenance cost also has been reduced to Rs.69.89 Lakhs per year (Public tax money) that was also saved by changing the STP site. After technical and financial evaluation the STP site is changed from Solur to A-Kaspa.

3	Necessity of purchasing private land.	Already 0.40 acres of private land (out of 3.18 acres) was purchased at A-Kaspa for constructing 12.50LL Elevated Service Reservoir for Water Supply Improvement Scheme under AMRUT for Ambur Municipality during 2018. The remaining 2.78 acres of private land (including MPS site – 0.23 acres) was purchased from private party at the cost of 5.22 crores by following the Thirupattur District Collector proceedings for land value. Now the land has become an asset (or) property to Ambur Municipality.
4	There is a ban on construction of highly polluting industries near river by Supreme court. How treatment plants are constructed near river Palar.	STPs are different from other industries. STPs treat the domestic sewage and dispose the treated sewage meeting prevailing standards. The design of STP with MBBR technology has been reviewed by Tamil Nadu Pollution Control Board and <b>Consent to Establish has been issued</b> on 23.09.2020 (TNPCB Consent Order No. 2001234381266 Dt.23.09.2020 for AIR ACT and Consent order No.2001134381266 Dt.23.09.2020 for WATER ACT).
5	Letting out the sewage effluent in to Palar, the river will be polluted and there will be health hazard to residents in and around STP site. i.e., A.Kaspa area.	The construction of STP prevents mixing of untreated sewage into Palar River. In the STP, the raw sewage is collected, treated, disinfected, and disposed to Palar River by following treated effluent standards as per NGT Norms for STPs. Also, additional unit (Polishing Pond) is included in the STP to improve the quality of the treated sewage. The STP operation will not affect the Palar River or the residents nearby.
6	How the odour from the STP controlled	The STP is designed with MBBR Technology. Further, by developing greeneries and planting more number of trees inside the STP premises. Hence odour will be controlled.

In addition to the above, it was explained that all the management measures for construction of STP have been addressed in the Initial Environmental Examination (IEE) report which will be followed by the Contractor during the implementation and supervised by the TWAD Board. All these were explained in detail to the public. Meeting concluded with vote of thanks by Municipal Engineer, Ambur Municipality.
